## Sta Brite® R--Specially Formulated Protection For New or Old Roofs and Fencing

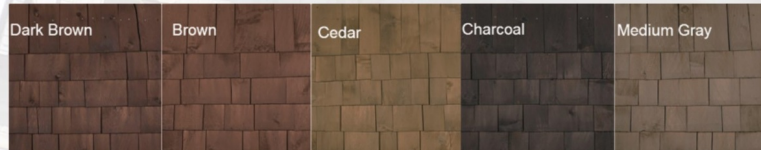

Sta Brite R is a specially formulated stain that penetrates the wood fibers so it will not crack, peel or blister. It allows the wood to expand and contract naturally in all weather conditions. Sta Brite R provides excellent protection from UV sunlight damage with natural pigments and titanium dioxide UV blockers. Sta Brite R also reduces moisture transmission that can cause decay, mold or other fungal problems in wood. It works best on rough sawn or porous wood. Sta Brite R should not be used on surfaces that receive foot traffic.

Re-apply every 3-5 years. Results may vary depending on weather conditions, dilution rate and surface preparation at time of application.

**Add years of service to your roof or fence by protecting them with Sta Brite R.**

### Directions for Use:

- For best results roof or fence should be washed and rinsed to remove all debris and fungal growth.
- Surface must be clean and dry before application.
- Mix one part Sta Brite R to 5-7 parts water.
- Apply with garden sprayer or high volume, low pressure sprayer to point of saturation. Do not allow a film to build up on wood surface.
- Pre-wet and rinse or cover concrete, siding and plants to prevent staining.
- Rinse overspray or spills with water before it dries.

### **About ISK Biocides, Makers of Sta Brite® R**

Sta Brite R is manufactured at our plant in Memphis, TN. We have over 80 years of innovation for products in industrial, commercial and residential wood applications including Woodguard® for log homes and wood siding, Woodguard SWO for decks and docks, CuSol® for prevention of fungus on wood roofs, general wood preservation and military applications as well as industrial products for sawmills and lumber producers. Let us help protect your investment.
